

# PLAN TO TRANSITION TOWARDS A NEW NORMAL

To protect public health and return to  
everyday life

28 April 2020

## STAGE 0 PREPARATION FOR LOCKDOWN- EASEMENT

Current stage. Establishment of steps for relief that are common to the entire country, once the transmission curve is flattened, allowing mobility outside of the home for certain activities, provided that safety instructions are met, based on citizens' responsibility and self-protection (individual sporting activities without contact and walking, caring for family gardens, certain economic activities with controlled capacity...). During this stage steps may be taken that will affect certain territories exclusively.

## STAGE I - INITIAL STAGE

Depending on how the control panel indicators are met in certain territories, partial opening of some activities will be allowed (small businesses with prior appointment or over-the-counter service, restaurants and cafeterias with takeaway service, agricultural activities, professional sports activities, certain tourism accommodations).

## STAGE II - INTERMEDIATE STAGE

During this stage activities that were restricted in Stage I may open, with limited capacity, such as restaurants with table and terrace service, communal areas in tourism accommodation, large shopping centres, etc.

## STAGE III - ADVANCED STAGE

During this stage all activities may open, provided that the pertinent safety and distancing measures are maintained. Among the measures contemplated during this stage are the opening of retail businesses that had not opened before, with limited capacity, bars and night clubs with very limited capacity, museums and cultural shows, also with limited attendance, etc.

## NEW NORMAL

Social and economic restrictions are lifted, but epidemiological surveillance is maintained, as well as the reinforced capacity of the health system and citizens' self-protection measures.
